The College

Assessment 2: Website Analysis and Planning

Student PowerPoint Template
Applied Project

Student details

Student name and ID: 22255923

Website selected: Charlie Pham – Project Manager / Demolition Engineering Manager

Website URL: https://charliepham.com/

Industry/future career area: Civil & Construction Engineering

Approved by Web Studios Director? Yes

Submission note

Complete this template, add screenshots and annotations, then save/export as a PDF for vUWS submission.

Use short explanations. Do not paste large blocks of text.

Word guide: 850 words equivalent across the analysis.

The College

Selection of website

Website Details

Website name: Charlie Pham

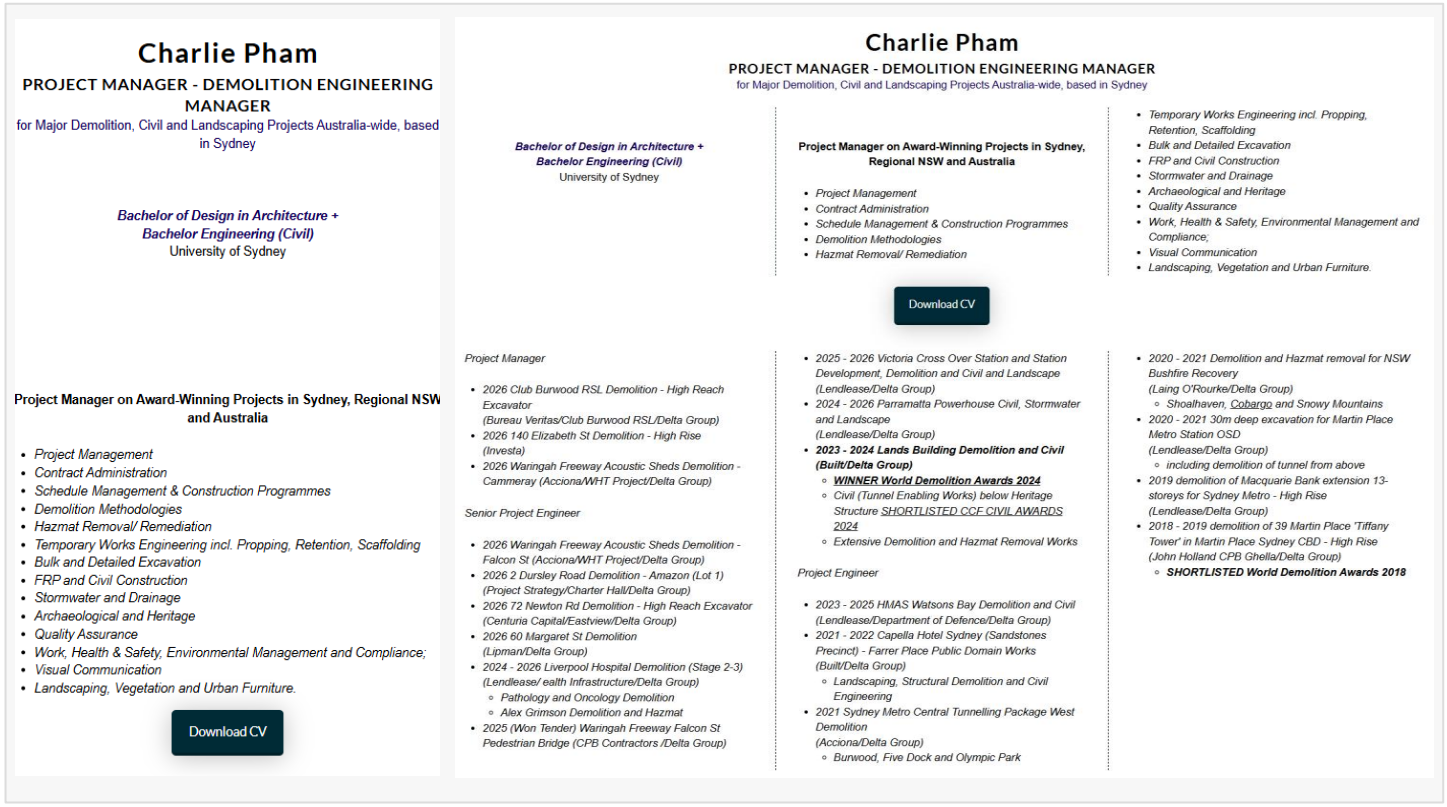

URL: https://charliepham.com/

Creator/company/person: Charlie Pham (individual professional)

Industry/career area: Civil Project Management

Why this website is relevant to your future portfolio:

This site belongs to a Sydney-based Project Manager specialising in major demolition, civil and landscaping projects. It demonstrates how an engineering professional can present technical project experience, awards, methodologies and career progression in a clear, credible format. The combination of dual qualifications (Architecture + Civil Engineering) and strong project evidence makes it highly relevant for a materials science / engineering student building a professional portfolio.

Charlie Pham

PROJECT MANAGER - DEMOLITION ENGINEERING MANAGER

for Major Demolition, Civil and Landscaping Projects Australia-wide, based in Sydney

Bachelor of Design in Architecture + Bachelor Engineering (Civil)
University of Sydney

Project Manager on Award-Winning Projects in Sydney, Regional NSW and Australia

- Project Management
- Contract Administration
- Schedule Management & Construction Programmes
- Demolition Methodologies
- Hazmat Removal/ Remediation
- Temporary Works Engineering incl. Propping, Retention, Scaffolding
- Bulk and Detailed Excavation
- FRP and Civil Construction
- Stormwater and Drainage
- Archaeological and Heritage
- Quality Assurance
- Work, Health & Safety, Environmental Management and Compliance;
- Visual Communication
- Landscaping, Vegetation and Urban Furniture.

Project Manager

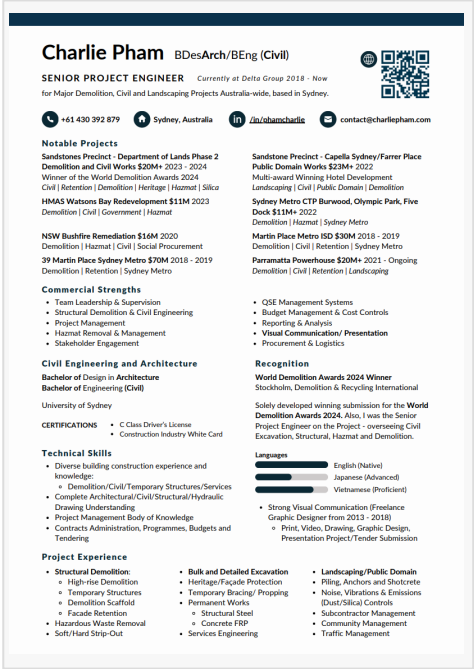

- 2026 Club Burwood RSL Demolition - High Reach Excavator (Bureau Veritas/Club Burwood RSL/Delta Group)
- 2026 140 Elizabeth St Demolition - High Rise (Investa)
- 2026 Waringah Freeway Acoustic Sheds Demolition - Cammeray (Acciona/WHT Project/Delta Group)

Senior Project Engineer

- 2026 Waringah Freeway Acoustic Sheds Demolition - Falcon St (Acciona/WHT Project/Delta Group)
- 2026 2 Dursley Road Demolition - Amazon (Lot 1) (Project Strategy/Charter Hall/Delta Group)
- 2026 72 Newton Rd Demolition - High Reach Excavator (Centuria Capital/Eastview/Delta Group)
- 2026 60 Margaret St Demolition (Lipman/Delta Group)
- 2024 - 2026 Liverpool Hospital Demolition (Stage 2-3) (Lendlease/ ealth Infrastructure/Delta Group)
  - Pathology and Oncology Demolition
  - Alex Grimson Demolition and Hazmat
- 2025 (Won Tender) Waringah Freeway Falcon St Pedestrian Bridge (CPB Contractors /Delta Group)
- 2025 - 2026 Victoria Cross Over Station and Station Development, Demolition and Civil and Landscape (Lendlease/Delta Group)
- 2024 - 2026 Parramatta Powerhouse Civil, Stormwater and Landscape (Lendlease/Delta Group)
- **2023 - 2024 Lands Building Demolition and Civil (Built/Delta Group)**
  - **WINNER World Demolition Awards 2024**
  - Civil (Tunnel Enabling Works) below Heritage Structure SHORTLISTED CCF CIVIL AWARDS 2024
  - Extensive Demolition and Hazmat Removal Works

Project Engineer

- 2023 - 2025 HMAS Watsons Bay Demolition and Civil (Lendlease/Department of Defence/Delta Group)
- 2021 - 2022 Capella Hotel Sydney (Sandstones Precinct) - Farrer Place Public Domain Works (Built/Delta Group)
  - Landscaping, Structural Demolition and Civil Engineering
- 2021 Sydney Metro Central Tunnelling Package West Demolition (Acciona/Delta Group)
  - Burwood, Five Dock and Olympic Park
- 2020 - 2021 Demolition and Hazmat removal for NSW Bushfire Recovery (Laing O'Rourke/Delta Group)
  - Shoalhaven, Cobargo and Snowy Mountains
- 2020 - 2021 30m deep excavation for Martin Place Metro Station OSD (Lendlease/Delta Group)
  - including demolition of tunnel from above
- 2019 demolition of Macquarie Bank extension 13-storeys for Sydney Metro - High Rise (Lendlease/Delta Group)
- 2018 - 2019 demolition of 39 Martin Place 'Tiffany Tower' in Martin Place Sydney CBD - High Rise (John Holland CPB Ghella/Delta Group)
  - **SHORTLISTED World Demolition Awards 2018**

Charlie Pham BDesArch/BEng (Civil)

SENIOR PROJECT ENGINEER *Currently at Delta Group 2018 - Now*

for Major Demolition, Civil and Landscaping Projects Australia-wide, based in Sydney.

- Piling, Anchors and Shotcrete
- Noise, Vibrations & Emissions (Dust/Silica) Controls
- Subcontractor Management
- Community Management
- Traffic Management

Selection check

The site should be responsive, professional, multi-page or content-rich, and relevant to your chosen industry or future career direction

Purpose, audience and industry relevance

Purpose

The website's main goal is to present Charlie Pham as a highly experienced Project Manager and Demolition Engineering Manager. It showcases award-winning projects, technical capabilities and career progression to attract employers, clients or senior roles in the Australian construction and demolition sector. It functions primarily as a professional online CV/portfolio rather than a sales or service site.

Target audience

Primary audience: Hiring managers, project directors and senior engineers in construction, demolition and civil contracting firms (e.g. Lendlease, Delta Group, Acciona, Built). Secondary audience: Clients and collaborators seeking proven technical project management capability. The audience values demonstrated project outcomes, safety/compliance experience, technical methodologies and professional credibility over visual flair.

Industry relevance

In the built environment and engineering fields, portfolios and professional sites typically prioritise project history, scale of responsibility, awards, technical skills and clear evidence of capability. This site follows those conventions strongly through detailed project lists, role progression and award highlights, making it a useful model for engineering and materials science students.

The College

Marketing persona profile

Persona snapshot

Name / role: Alex Rivera – Senior Project Manager / Talent Acquisition Lead

Age range: 38–48

Industry / job title: Construction / Demolition / Civil Engineering (Sydney-based contractor or developer)

Needs or goals: Quickly assess a candidate's technical depth, project scale experience, safety record and ability to deliver complex urban projects.

What they want from the website: Clear evidence of relevant project experience, awards, technical skills and a downloadable CV within 30–60 seconds.

Psychographics

Values: Safety, technical competence, delivery on complex projects, professional integrity

Motivations: Finding reliable engineers who can handle high-stakes demolition and civil works

Frustrations: Vague portfolios, lack of project specifics, poor mobile experience, missing contact or CV options

Preferred design style: Clean, professional, text-heavy but scannable, minimal distraction

Technology use: Desktop for detailed review, mobile for quick checks between site visits

Website fit

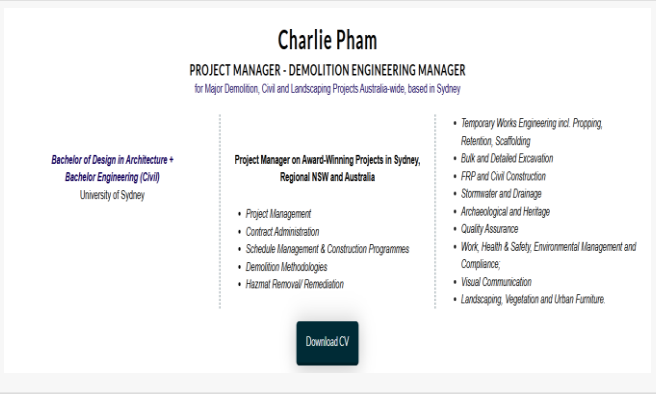

The clear project lists, award call-outs and "Download CV" button strongly appeal to this persona. Dense text blocks and limited visual hierarchy may slow scanning on first visit. Adding stronger project thumbnails or short outcome summaries would increase trust and conversion.

The College

Visual design analysis

Colour

What colour palette is used?
How does it affect mood, hierarchy and brand personality?

Primarily white background with black/dark grey body text and dark blue/purple for headings and key links. A dark teal “Download CV” button provides the main call-to-action. The palette feels professional, serious and industry-appropriate (construction/engineering) rather than creative or playful. It supports readability and credibility but offers limited visual hierarchy or brand personality.

Typography

What typefaces, sizes and weights are used?
How do they guide the eye?

Clean sans-serif fonts. Strong hierarchy through bold name and job title at the top, then section headings and bullet lists. Text is dense; line lengths are comfortable on desktop but become long walls of text on mobile. The typography prioritises information over style.

Analysis

This design choice is effective because the clean white background and dark text prioritise readability and professional seriousness expected in engineering.

Layout

How are grids, spacing, alignment and negative space used?

Three-column layout on desktop for skills and experience lists, then longer scrolling project sections with images. Generous white space at the top, tighter spacing in project lists. Alignment is consistent. Negative space is used effectively in the header but reduces further down the page.

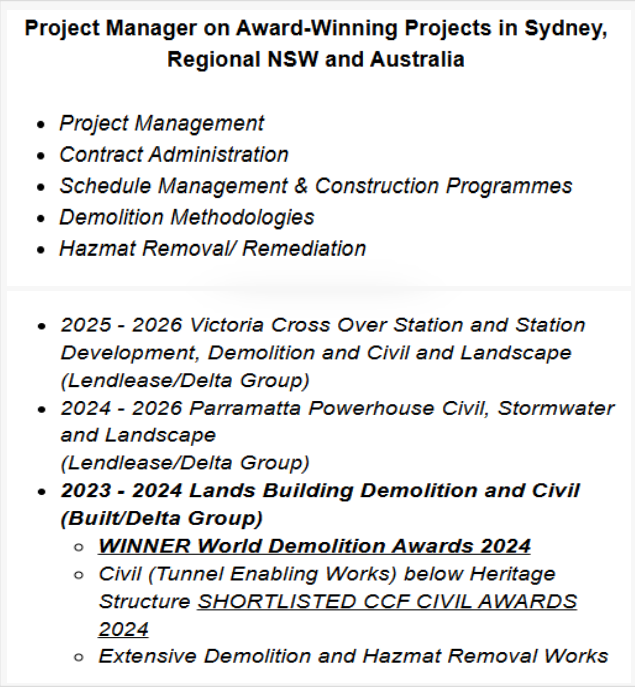

Imagery

Do images match the brand and industry?
Are they clear, purposeful and consistent?

Project photos, award logos and a short video for the World Demolition Awards 2024 winner. Images are relevant and support credibility, but many projects remain text-only. Consistency is good; quality is professional.

The College

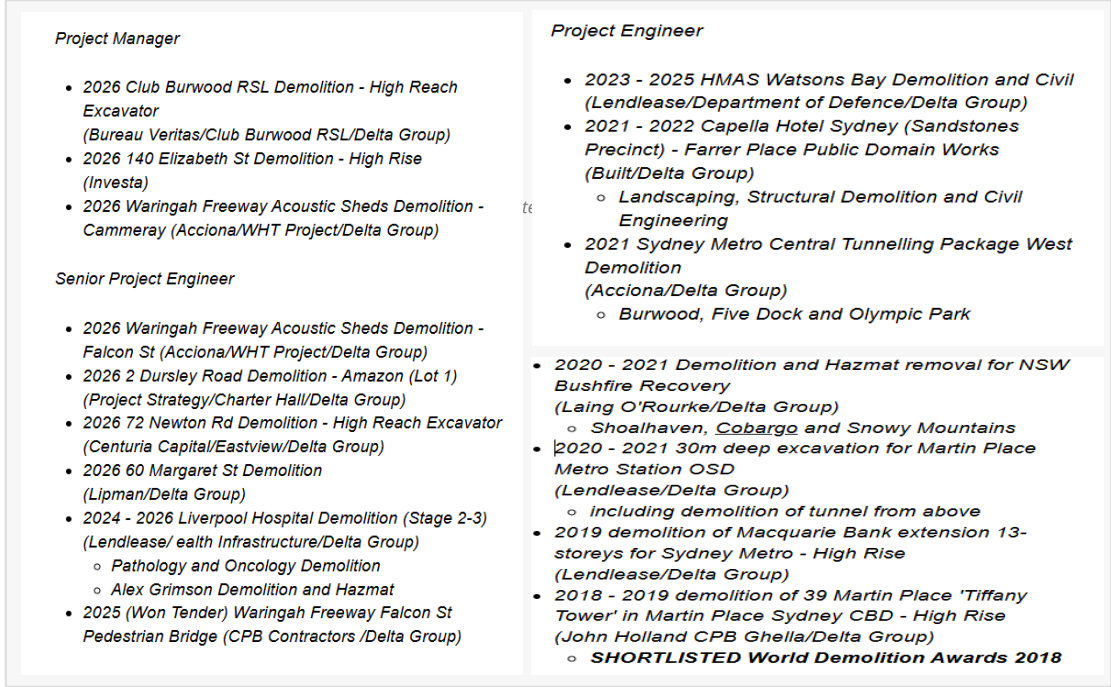

Content organisation and clarity

  - ***SHORTLISTED World Demolition Awards 2018***

Explanation

Although the content is easy to scan, the order may be a little confusing to interpret on the desktop page as the content hierarchy seems to be jumbled together, the mobile homepage seems to be easier to navigate. However, the homepage tends to showcase experience and skills excellently.

Content strengths

1. Clear role progression (Project Engineer → Senior Project Engineer → Project Manager) with specific years and clients.
2. Strong use of awards (World Demolition Awards 2024 Winner, shortlisting) as credibility signals.
3. Detailed project descriptions that mention methodologies, challenges and outcomes (e.g. heritage salvage, hazmat volumes, recycling rates).

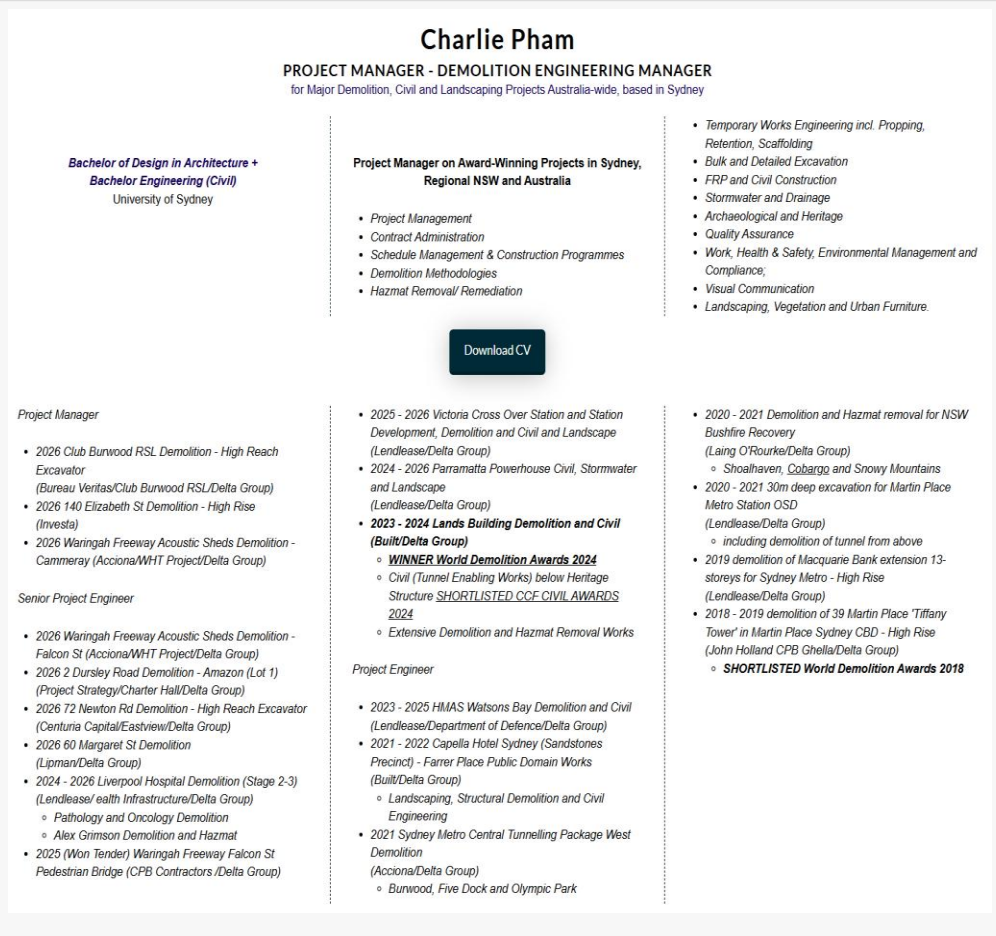

Content weaknesses

1. Long, dense bullet lists without visual breaks or project cards make scanning difficult.
2. Limited storytelling structure (problem → role → solution → result) on most projects.
3. No dedicated “About” or soft skills/philosophy section; the site jumps straight into experience.

Professional impact

The content successfully positions Charlie as a highly experienced technical project manager with major project and award evidence. This builds strong credibility for senior engineering roles. However, the volume of text without stronger visual hierarchy or summaries can limit quick impact for time-poor recruiters.

Responsiveness and device testing

Download CV

Test notes

Tested on desktop (1920px), and mobile viewports using browser tools and real devices.

Response paragraph

On desktop the three-column layout and project sections work well. On mobile the layout collapses into a single long scrolling column. The header remains clear, the “Download CV” button stays prominent, and text remains readable. However, the dense project lists become very long walls of text, and some images scale adequately but the overall experience feels less refined. Navigation is simple (mostly scroll-based) so it remains usable, but prioritising key projects or adding expandable sections would improve the mobile experience significantly.

User experience, navigation and accessibility

Navigation

The site is essentially a single long page. There is no traditional multi-page menu. Users scroll to find experience, projects and awards. The “Download CV” button is the main clear call-to-action. Finding specific projects requires scrolling or browser search.

Readability

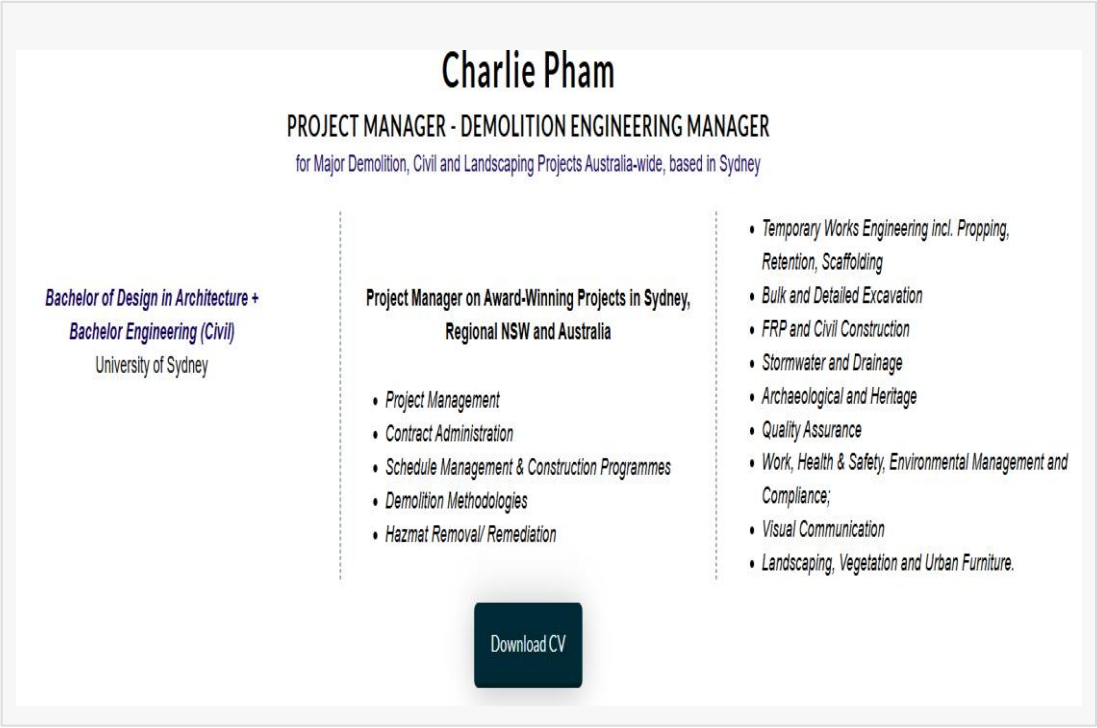

Text size is comfortable on desktop. Contrast is high (dark text on white). Line length becomes long on wider screens. On mobile, the continuous lists reduce readability.

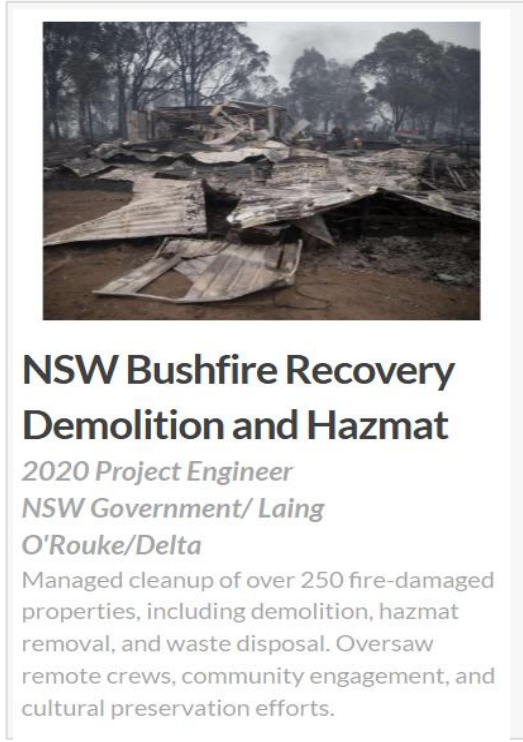

Accessibility

Good colour contrast. Limited use of headings hierarchy in some sections. Images appear to lack detailed alt text in places. Interactive elements (video, download button) are reasonably clear.

User journey

The site is easy for a motivated professional to navigate by scrolling, and the key information (role, awards, CV download) is findable. The main difficulty is the volume of unstructured text. The single biggest improvement would be introducing clearer section headings, project cards or collapsible sections to improve both desktop scanning and mobile usability.

Evaluation

It is easy to find the main information (job title, skills, awards and the Download CV button) by simply scrolling. The high contrast also makes the text readable on desktop. The main difficulty is the long, dense project lists, which make it hard to quickly scan or jump to a specific project especially on mobile. The single biggest improvement would be turning the long bullet lists into clearer project cards or collapsible sections so users can find information faster.

The College

Strengths and weaknesses

Strengths

1. Strong project evidence and award highlights immediately establish professional credibility in the demolition and civil sector.
2. Clear career progression and specific client/project names help the target audience assess relevance quickly.
3. The prominent “Download CV” button and LinkedIn link support the industry expectation of easy access to full credentials.

Weaknesses

1. Dense, long bullet lists reduce scannability and can overwhelm first-time visitors.
2. Limited visual hierarchy and storytelling on individual projects weakens engagement.
3. Single long-page structure without clear secondary navigation or section anchors makes it harder to jump to specific information.

Use evidence. Every strength or weakness should point to a screenshot, page section, design feature or user experience issue.

Recommendations and improvements

Recommendation 1

Issue identified: Dense text lists reduce scannability.

Proposed improvement: Convert major projects into card-style layouts with image, short summary, role, and key outcomes.

Why it would help users: Hiring managers can assess relevance in seconds.

How this connects to industry standards: Engineering portfolios increasingly use visual project case studies rather than pure lists.

Recommendation 2

Issue identified: Limited storytelling structure.

Proposed improvement: Add brief “Challenge – Approach – Outcome” summaries for 3–4 flagship projects.

Why it would improve professionalism or credibility: Demonstrates problem-solving ability, not just experience.

Evidence from your analysis: Award-winning Lands Building project already has richer description; extending this pattern would strengthen the whole site.

Recommendation 3

Issue identified: Mobile experience becomes a long text scroll.

Proposed improvement: Prioritise top 4–5 projects on mobile and use expandable sections for older work.

What you will apply to your own Assessment 3 website: Clean project cards + clear hierarchy + strong mobile-first structure.

Expected impact: Faster comprehension and higher professional impact for both desktop and mobile viewers.

Apply the analysis to your own website

What I will adopt

1. Clear presentation of technical skills and project evidence.
2. Strong use of awards or measurable outcomes as credibility signals.
3. Prominent, easy access to a downloadable CV/resume.

What I will avoid

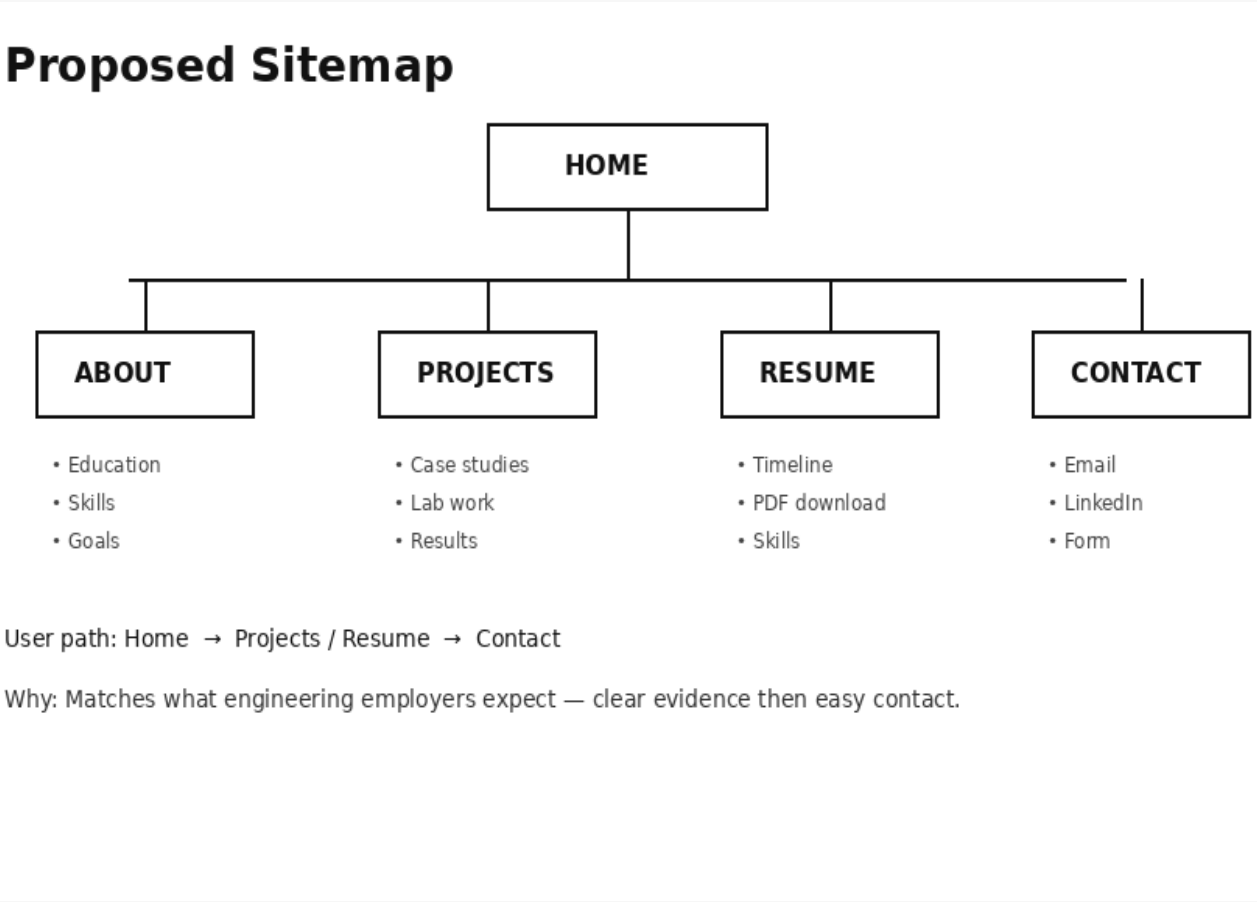

1. Long uninterrupted bullet lists of projects.
2. Overly dense text without visual breaks or hierarchy.
3. Relying only on a single long scrolling page without clear sectioning.

My design direction

A clean, professional engineering/materials science portfolio aimed at graduate recruiters and technical managers. Focus on clear hierarchy, project case studies that show process and results, strong mobile experience, and a modern but serious visual system that reflects technical competence.

The College

Proposed sitemap for your own portfolio

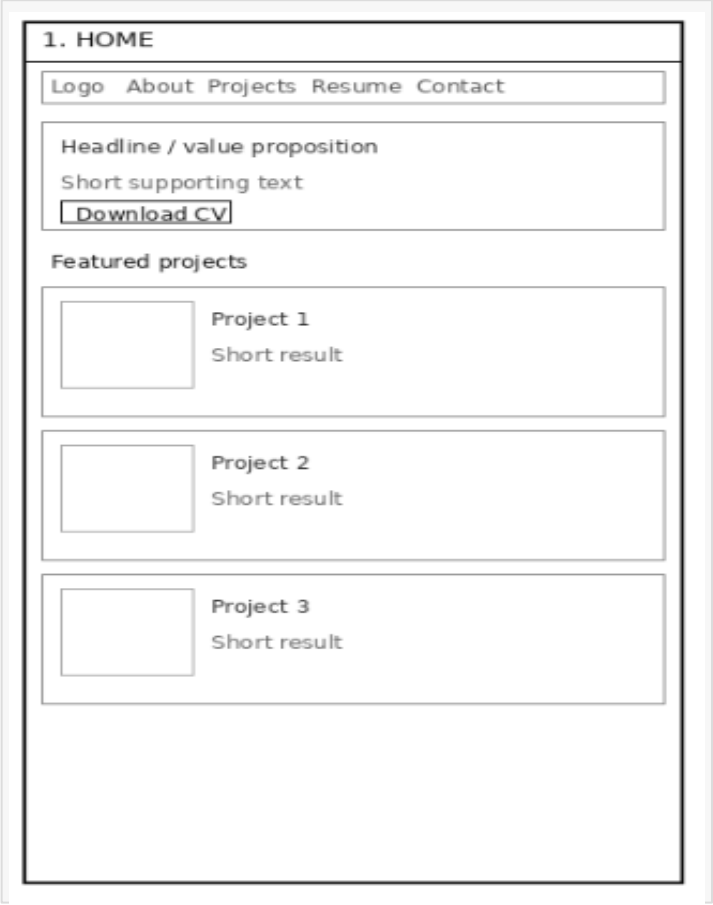

Explanation

These pages match industry expectations for engineering portfolios: immediate evidence of capability on the home page, deeper project storytelling, and easy access to full credentials. Users can move from overview → evidence → contact efficiently.

The College

Basic wireframe sketches

Wireframes can be hand drawn or digital. Focus on layout, hierarchy, navigation and content placement — not final visual polish.

Your colour, typography and content plan

Colour palette

Add colour swatches and HEX/RGB codes.

Explain the mood, accessibility and audience fit.

Use Adobe Color or another palette tool.

Primary: Deep navy or charcoal (#1a1a2e or similar)
Accent: Teal or strong blue for buttons and highlights
Background: Off-white / light grey
Text: Near-black
Explain mood: Professional, technical, trustworthy, clean.

HEX codes to copy:
Deep Navy: #0F172A
Classic Navy: #1E3A5F
Teal: #0D9488
Off-White: #F1F5F9
Slate: #334155

Deep navy is used for headings because it feels professional and trustworthy. Teal is the accent colour for buttons. Off-white background with dark text keeps the site easy to read. The palette is simple, serious and suitable for a civil and construction engineering portfolio.

Typography

Heading font: Modern sans-serif (e.g. Inter, Montserrat or similar)

Body font: Clean readable sans-serif

Why these choices suit your industry and audience: Supports technical clarity and modern professional appearance expected in engineering.

Google Fonts link or source: (n/a)

Content plan

Home page message: Clear value proposition + 3 featured projects + CV button.

About me content: Education, technical strengths, career direction.

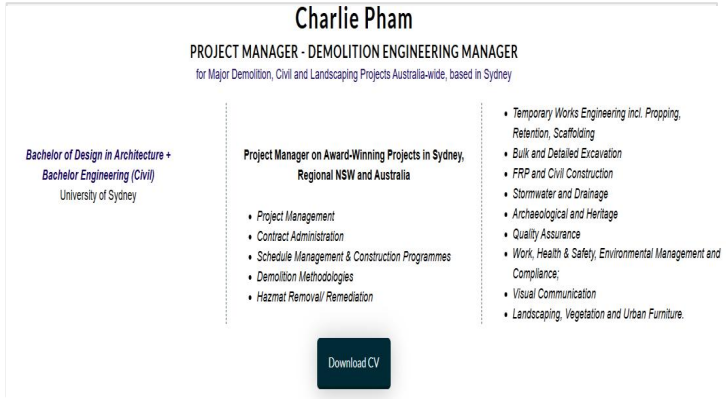

Portfolio examples: Lab/test data projects, design work, analysis case studies.

Resume/download: Downloadable PDF + Key experience.

Contact/social links: Email
